Summary

Full-Stack Developer with 2+ years of professional experience building scalable, high-performance product interfaces using React, Next.js, TypeScript, and Tailwind CSS. Over the past 1 year, deliberately expanded into backend development — using SQL, Node.js, Express.js, and OpenSearch from the ground up, and shipping a full-stack project end-to-end. Strong foundation in component architecture, Core Web Vitals, RBAC, and Agile delivery; actively growing toward full-stack ownership.

Skills

- **Languages:** JavaScript (ES2022+), TypeScript, HTML5, CSS3, SQL
- **Frontend:** React, Next.js, Tailwind CSS, Redux, React Query (TanStack), shadcn/ui, Material UI
- **Backend:** Node.js, Express.js, Zod (validation), Supabase Auth (JWT)
- **Databases:** PostgreSQL (Supabase), MySQL, OpenSearch / Elasticsearch
- **Testing:** Jest, React Testing Library (RTL), Cypress, Playwright
- **Tools & DevOps:** Git, GitHub Actions (CI/CD), Vite, Vercel, NATS, i18n
- **Concepts:** Core Web Vitals, SEO, RBAC, Atomic Design, SOLID Principles, Clean Code, REST API Integration, Accessibility (WCAG 2.1), Agile/Scrum

Experience

Full-Stack Developer — Avesta Technologies

Nov 2023 – Present

- Designed and built a greenfield industrial IoT admin platform with 10+ modules covering machine onboarding, real-time monitoring, RBAC workflows, and analytics dashboards; worked within a NATS-based event-driven architecture for live data delivery.
- Architected a modular frontend using Atomic Design and layered patterns; introduced reusable component libraries and scaffolding templates that increased team development speed by 35%.
- Implemented a 5-role RBAC system with protected routing and conditional UI rendering, enforcing least-privilege access across all platform views.
- Optimised Core Web Vitals (LCP, FCP) for data-heavy dashboards via code splitting, lazy loading, and strategic memoisation, reducing unnecessary re-renders on high-frequency update components.
- Contributed to *view.com.au*, improving organic search rankings from 7th to 3rd position via technical SEO enhancements including structured data, canonical tags, and server-side metadata generation.
- Built and maintained unit and E2E test suites (Jest, RTL, Cypress, Playwright) achieving ~75%+ coverage on business-critical modules, reducing regression escapes to QA.
- Enforced accessibility standards (WCAG 2.1, ARIA, semantic HTML) and configured GitHub Actions pipelines for automated linting, testing, and preview deployments.
- Collaborated in an Agile/Scrum environment with sprint planning, code reviews, and iterative feature delivery across cross-functional product teams.

Frontend Intern — Avesta Technologies

Feb 2023 – Nov 2023

- Developed React and Next.js features including CRUD operations, reusable UI components, and REST API integrations.
- Contributed to responsive UI development and frontend architecture improvements for client-facing applications and internal tooling.

Software Development Intern — Karbh IT Solutions

Jul 2022 – Aug 2022

- Built backend features using Node.js and MySQL, writing queries manually to support dynamic data-driven web applications.

Projects

Dealers Invoice

React, TypeScript, Node.js, Express, Supabase, PostgreSQL, Tailwind CSS, shadcn/ui

GitHub — Live

- Built a full-stack SaaS invoice management tool end-to-end — solo project from backend API to production deployment on Vercel.
- Developed a layered Express.js backend with Zod request validation and structured error handling; secured routes using Supabase Auth (JWT) with Row-Level Security (RLS) for multi-user data isolation.
- Implemented and worked with a PostgreSQL schema (via Supabase) covering vendors, invoices with GST line-item calculations, payment tracking, and report aggregation queries.
- Built a scalable React frontend using Atomic Design, custom hooks, and protected client-side routing with role-based access control on the UI layer.
- Delivered analytics dashboards with filterable views, summary metrics, and CSV export backed by server-side query endpoints.

Weather Sphere

React, TypeScript, Tailwind CSS, Three.js

- Built a responsive weather app with real-time third-party API integration, client-side caching, and 3D globe visualisation using Three.js.

Achievements

- Secured 2nd place in an internal AI-powered hackathon at Avesta Technologies, delivering a full-stack web application (React + Node.js) within 36 hours.

Education

LJIET

2019 – 2023

B.E. Electronics and Communication — CGPA: 8.67/10
